

AMENDMENT TO THE CLAIMS

Please **CANCEL** claim 23.

Please **AMEND** claims 1, 4, 18-20, 24 and 25; and

Please **ADD** new claims 31-37 as follows.

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method of forming a semiconductor structure comprising steps of:
forming spacer voids between a gate and the mandrel layer;
creating recesses in a substrate below and in alignment with the spacer voids;
filling a first portion of the recesses with a stress imposing material;
filling a second portion of the recesses with a semiconductor material; and
removing the mandrel layer.
2. (Original) A method according to claim 1, further including forming dummy spacers between the mandrel layer and the gate and forming a nitride interface as an etch stop in the recesses.
3. (Original) A method according to claim 1, wherein the recesses include a first recess and a second recess, the first recess and the second recess having a depth greater than a depth of the bottom of a channel area of the gate.
4. (Currently Amended) A method according to claim 3, wherein the first recess has a depth substantially equal to ~~the~~ a depth of the second recess.
5. (Original) A method according to claim 3, wherein the first recess has a depth of about 500 to 2000 angstroms.

6. (Original) A method according to claim 1, further comprising forming dummy spacers and removing the dummy spacers to form the spacer voids, wherein:

- a first dummy spacer has a first width;
- a second dummy spacer has a second width;
- a first recess of the recesses has a width substantially equal to the first width of the first dummy spacer; and
- a second recess of the recesses has a width substantially equal to the second width of the second dummy spacer.

7. (Original) A method according to claim 6, wherein the first width is substantially equal to the second width.

8. (Original) A method according to claim 7, wherein the first width is about 100 to 1000 Å.

9. (Original) A method according to claim 1, wherein the recesses are substantially equidistant from the gate.

10. (Original) A method according to claim 1, wherein the stress imposing material is a material that introduces a compressive stress.

11. (Original) A method according to claim 1, wherein the stress imposing material is a material that introduces a tensile stress.

12. (Original) A method according to claim 1, wherein the stress imposing material is a material that introduces a stress that degrades electron or hole mobility in the semiconductor structure.

13. (Original) A method according to claim 1, wherein the stress imposing material is a material that introduces a stress that enhances electron or hole mobility in the semiconductor structure.

14. (Original) A method according to claim 1, wherein the stress imposing material is a material comprised of at least one of polysilicon, SiO_2 , $\text{Si}_{1-x}\text{Ge}_x$, Si_xN_y , or Si_xON_y .

15. (Original) A method according to claim 1, wherein the semiconductor material is comprised of epitaxially grown Si.

16. (Original) A method according to claim 1, wherein: the gate is an n-channel field effect transistor gate; and the stress imposing material is a material that introduces a tensile stress in a direction parallel to a direction of current flow for the n-channel field effect transistor gate.

17. (Original) A method according to claim 1, wherein: the gate is a p-channel field effect transistor gate; and the stress imposing material is a material that introduces a compressive stress in a direction parallel to a direction of current flow for the p-channel field effect transistor gate.

18. (Currently Amended) A method according to claim 1, further comprising a step of annealing after filling the first portion of the ~~first recess and the first portion of the second recess with a~~ recesses with the stress imposing material.

19. (Currently Amended) A method of forming a semiconductor structure comprising steps of:

forming ~~first~~ dummy spacers on sides of a gate formed on a substrate;
forming a mandrel layer with portions of the mandrel layer abutting the dummy spacers;

removing the dummy spacers to form spacer voids between the gate and the mandrel layer;

creating recesses in the substrate below and in alignment with the spacer void ~~void~~ voids;

filling a first portion of the recesses with a stress imposing material; and

filling a second portion of the recesses with a semiconductor material.

20. (Currently Amended) A method according to claim 19, further comprising the ~~steps~~ step of:

~~filling a second portion of the recesses with a semiconductor material; and~~

removing the mandrel layer,

wherein:

the first portion of the recesses is below the bottom of a channel area of the gate; and

the stress imposing material is a material that introduces one of a compressive stress and a tensile stress in the channel area.

21. (Original) A method according to claim 19, wherein the stress imposing material is a material comprised of at least one of polysilicon, SiO_2 , $\text{Si}_{1-x}\text{Ge}_x$, Si_xN_y , or Si_xON_y .

22. (Original) A method according to claim 20, wherein the gate is one of:

an n-channel field effect transistor gate and the stress imposing material is a material that introduces a tensile stress in a direction parallel to a direction of current flow for the n-channel field effect transistor gate; and

a p-channel field effect transistor gate and the stress imposing material is a material that introduces a compressive stress in a direction parallel to a direction of current flow for the p-channel field effect transistor gate.

Claim 23 (Canceled).

24. (Currently Amended) A method according to claim ~~23~~ 31, wherein the steps are performed in the order recited.

25. (Currently Amended) A method according to claim ~~23~~ 31, wherein one of:
the ~~first type of~~ field effect transistor gate is an n-channel field effect transistor gate and the stress imposing material configured to enhance performance of the n-channel field effect transistor gate is a material that introduces a tensile stress in a direction parallel to a direction of current flow for the n-channel field effect transistor gate; and

the ~~first type of~~ field effect transistor gate is a p-channel field effect transistor gate and the stress imposing material configured to enhance performance of the p-channel field effect transistor gate is a material that introduces a compressive stress in a direction parallel to a direction of current flow for the n-channel field effect transistor gate.

Claims 26-30 (Canceled).

31. (New) A method of forming a semiconductor structure comprising steps of:
forming a field effect transistor gate on a substrate;
forming a first dummy spacer and a second dummy spacer on sides of the field effect transistor gate;
forming a mandrel layer with portions of the mandrel layer abutting the first and second dummy spacers for the field effect transistor gate;
after masking the semiconductor structure, introducing stress to the field effect transistor gate; and
removing the mandrel layer,
wherein the step of introducing stress material comprises:
removing the first and second dummy spacers from the field effect transistor gate to form first and second spacer voids between the field effect transistor gate and the portions of the mandrel layer;

creating a first recess in the substrate below and in alignment with the first spacer void and a second recess in the substrate below and in alignment with the second spacer void for the field effect transistor gate;

filling a first portion of the first recess and a first portion of the second recess with a stress imposing material configured to enhance performance of the field effect transistor gate;

filling a second portion of the first recess and a second portion of the second recess for the field effect transistor gate with a semiconductor material; and
unmasking the semiconductor structure.

32. (New) A method according to claim 31, wherein the stress imposing material is a material that introduces a compressive stress.

33. (New) A method according to claim 31, wherein the stress imposing material is a material that introduces a tensile stress.

34. (New) A method according to claim 31, wherein the stress imposing material is a material that introduces a stress that degrades electron or hole mobility in the semiconductor structure.

35. (New) A method according to claim 31, wherein the stress imposing material is a material that introduces a stress that enhances electron or hole mobility in the semiconductor structure.

36. (New) A method according to claim 31, wherein the stress imposing material is a material comprised of at least one of polysilicon, SiO_2 , $\text{Si}_{1-x}\text{Ge}_x$, Si_xN_y , or Si_xON_y .

37. (New) A method according to claim 31, wherein the semiconductor material is comprised of epitaxially grown Si.
